

Care and cleaning of Recacril® fabrics (Infinity Plus Finish)

The new high-tech coating on Recacril® fabrics, Infinity Plus, provides long-lasting protection against fungi and excellent water repellency, without the presence of PFAS in its formulation. While the Infinity Plus finish is not resistant to oil stains, we can easily remove stains with proper maintenance.

Proper care of the fabrics is essential, as the accumulation of dust, atmospheric pollutants, organic materials, and general dirt can damage this protection, shortening the fabric's lifespan. For this reason, it is necessary to remove it.

If cleaning is done regularly, in most environments, a more thorough cleaning process will only be needed once every 1 or 2 years.

Cleaning Preparation: Mild, biodegradable detergent, warm water, soft brush or sponge, clean cloths or towels, bleach, liquid dishwashing detergent.

General Cleaning

1. Remove any dirt or debris with a soft brush or by vacuuming.
2. Clean with a moderate-pressure water spray.
3. Apply a solution of mild detergent and warm water.
4. If there are any stubborn stains, use a soft brush to agitate the stain.
5. Rinse thoroughly with clean water at moderate pressure to remove any detergent residue.
6. Allow it to air dry, and do not roll up the awning until the fabric is completely dry.

Regular Maintenance

Regularly vacuum or brush the fabric to avoid dirt buildup. Treat stains immediately to prevent them from setting.

Precautions

Avoid using harsh chemicals.

Storage

Ensure the fabrics are clean and dry before storing. Store in a cool, dry place to avoid moisture and mold.

Cleaning of Intense Stains

1. Prepare a solution of ¼ cup of liquid dishwashing detergent with 1 cup of bleach for every 4 liters of water.
2. Apply the cleaning solution to the affected area and leave it for 10-15 minutes.
3. Thoroughly scrub the entire surface with a soft brush.
4. Rinse thoroughly to remove all the solution.
5. Allow the fabric to air dry.

Maintenance for Long-Lasting Life

Recacril fabrics are treated with the Infinity "non-PFAS" finish, which lasts for many years. However, if a deep clean is performed and a specific product for stains is used, we recommend applying a reinforcement treatment.

Once cleaning is finished, apply a PFAS-free waterproofing product, following the manufacturer's instructions.

Tips

- For stubborn and persistent stains, refer to the specific stain chart.
- If stains persist, repeat the process or increase the amount of the recommended solution.
- Always try to clean as much fabric as possible to avoid water rings and marks.
- To protect the environment, make sure to collect the dirty water when using bleach, as it can be harmful to people, animals, and plants.

By following this guide, you can keep your fabrics clean and in good condition without using products that contain PFAS.
